In Re: COVID-19

Dear Sunset Customer,

As we mentioned earlier this week, Sunset believes that our employees' and customers' safety is a top priority.

Over the last few weeks, we have all been affected in one way or the other by this terrible COVID-19 virus. Recently, we have seen guidance from both State and Federal agencies asking businesses to shutdown to help stem the spread of this virus. Many of you have followed that guidance.

Cyber Activity

Several cybersecurity firms are reporting an uptick in attacks against a range of targets, all using the ongoing COVID-19 pandemic as a hook to trick their victims into running malware. It comes as large portions of the globe are on lockdown amid the outbreak of the coronavirus strain.

The national cybersecurity firm, "Recorded Future," has observed cybercriminals using the coronavirus to spread several different types of malware against targets in the US. The researchers found that some of these campaigns imitate "trusted" organizations like the World Health Organization (WHO), the U.S Centers for Disease Control and Prevention (CDC), and State Health Agencies. The result is an organization that is infected.

Sunset now more than ever is at the forefront of making sure our customers' environments are secure and protected against malware, virus, and hacking events.

While you may have decided to close down (except for emergencies), we will continue to work around the clock to protect your systems and data. Sunset will continue to monitor systems, apply patches, monitor backups, and firewalls even when you are absent.

Please feel "Rest Assured" that Sunset will continue to do our best to make sure your systems stay current during this very difficult time. So when you are ready to work, your systems will be ready for you.

Be safe.

Yaron Baitch, CIO
